Xap Communicator: Automated Transcript Fulfillment and Delivery

In the diagram to the right, the transcript institution uses the Xap Communicator to automatically retrieve transcripts generated by the institution's SIS (Step 4). These transcripts are then sent to the Xap Server (Step 5). From there, the transcripts are routed and received by the recipient institution's Xap Communicator (Step 6). The transcripts may then be automatically sent to the recipient institution's SIS, if desired (Step 7).
